

Activity 5 - Lists again

Using the HTML below and the list item CSS properties, affect the following changes:

- instead of numbers, have the list items indexed by the alphabet.
- change the `` tag to `` (and the closing `` to ``) and style the list items to have square bullet points.
- download this [simple triangle shape](#)  and style the list items to use it.

This can be [directly downloaded](#) as a project that can be opened in the [Intel XDK](#). The file to edit is `www/index.html`

NOTE: This activity is best conducted in the XDK (or in CodePen), **not in the discussion forum** below. The discussion forum includes its own stylesheet which may override the styles you want to experiment with.
