Activity 4 - Units

Using the HTML below, size the text using rem units.

- use `px` units to set the root size of the text for the document

- use `rem` units to size the `h1` and `li` tags.

- change the text size of the root CSS rule. You should observe all the text of the document adjusting appropriately.

- change the `h1` so that it uses `px` units. As the root CSS rule is changed, the `h1` will no longer adjust with the rest of the document.

You can directly download (zip file) this as an Intel XDK project. The file to edit is **`www/index.html`**

NOTE: *This activity is best conducted in the XDK (or in CodePen),* **not in the discussion forum** *below. The discussion forum includes its own stylesheet which may override the styles you want to experiment with.*
